Flyaway

The code for the project is hosted on: [GitHub](#)
Project Developer: **Vijaysai Yekbote**

This document contains the following sections:

Sprint Planning and Task Completion

Note: A separate document for sprint planning is attached to the Zip.

The project is planned to be completed in two Sprints. The task assumed to be completed are:

Sprint 1:
- Flow chart of the application
- Initializing Git repository to track changes of development
- Writing the source code

Sprint 2:
- Testing the program with various user inputs
- Pushing project to GitHub
- Creating documentation

Core Concepts Used in the Project

- JSP
- Servlets
- JDBC
- Tomcat
- HTML
- CSS
- Exception Handling

Product Capabilities

The application has the following capabilities:
1. Welcome page
2. User login
3. User signup
4. Search Flights
5. Search results
6. Passenger details
7. Payment
8. Thankyou
9. Admin page with respective functions which include
   9.1. Change Admin Password
   9.2. Show bookings
   9.3. Add flights

Source code for each of the capabilities with output is shown below:
**Note:** Complete source code, respective servlets of the app is zipped please check zip/Gitrepo for reference.

Welcome Page of the Application:
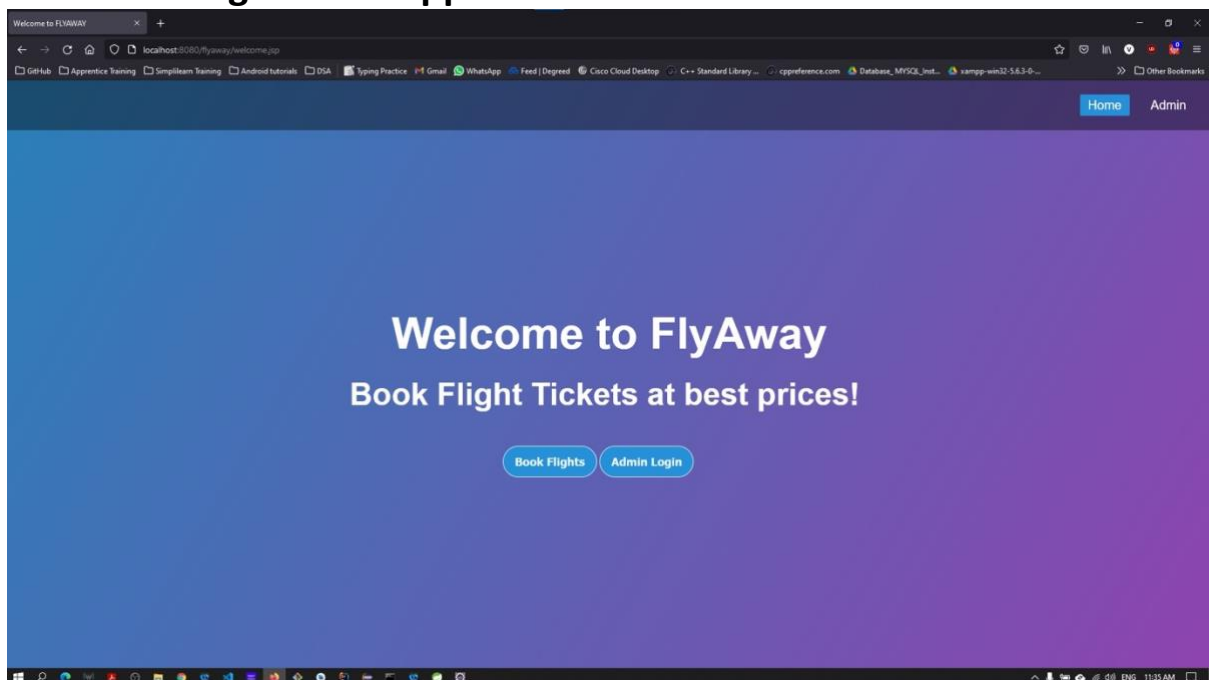

Source Code

```jsp
<%@ page language="java" contentType="text/html; charset=ISO-8859-1"
    pageEncoding="ISO-8859-1"%>
<!DOCTYPE html>
<html>
<head>
<meta charset="ISO-8859-1">
<title>Welcome to FLYAWAY</title>
<link rel="stylesheet" href= "css/welcome.css">
</head>
<body>
<div class="wrapper">
  <nav class ="navbar">
  <ul>
    <li><a class = "active" href = "welcome.jsp">Home</a></li>
    <li><a href = "adminlogin.jsp">Admin</a>
  </ul>
  </nav>
  <div class="center">
  <h1> Welcome to  FlyAway </h1><br>
  <h2>Book Flight Tickets at best prices!</h2><br>
  <div class = "bookFlights">
  <button onclick = "location.href = 'userlogin.jsp'" class = "searchpage">Book Flights</button>
  <button onclick = "location.href = 'adminlogin.jsp'" class="adminlogin">Admin Login</button>
  </div>
  </div>
</div>
</body>
</html>
```

User Login Page
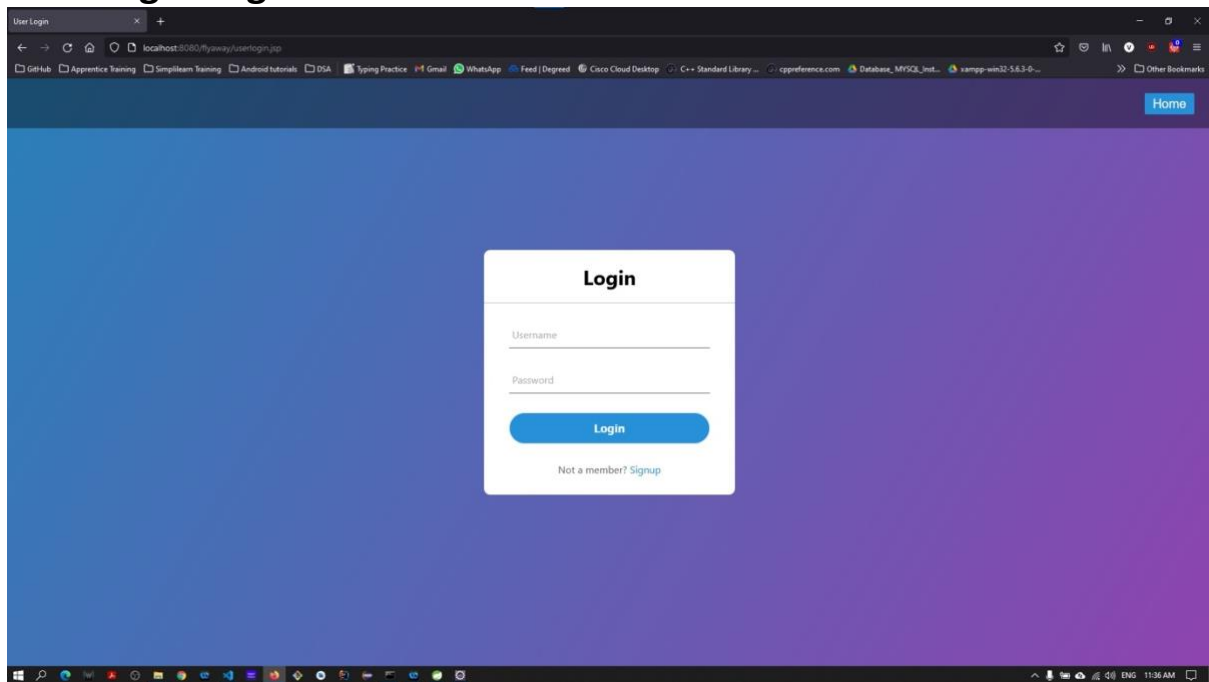

Source Code

```jsp
<%@ page language="java" contentType="text/html; charset=ISO-8859-1"
    pageEncoding="ISO-8859-1"%>
<!DOCTYPE html>
<html>
<head>
<meta charset="ISO-8859-1">
<title>User Login</title>
<link rel="stylesheet" href="css/userlogin.css">
</head>

Unique Selling Points of the Application:

1. The application is designed to keep on running and taking user inputs even after exceptions occur.
2. Material UI
3. Responsive Web UI.

Conclusion:
Further improvements to the application can be done which may include:
- User forgot password
- Show users in admin dashboard.
- Option to book round tickets.
